

Why you must get it:

This software leverages original hardware which basically uses the computer for making music. This has a tabbed user interface bringing the editor window, the mixer window and all other preferences tabs within the same window. This application typically supports control masters like VCAs. It has unlimited music track playing features along with multiple mixing of audio at the same

time and has a record on tempo ramping too. Lua scripting from this software allows the user to make their own by adding new features with manual scripts. It has integrated side chaining and pin connections points. Even the inline plugin display is merged in the same working window. This application enables the user to create non-destructive, non-linear editing with unlimited undo and redo options through the editing sessions. This has best working mode with overlapping regions, transparent and opaque regions.

Qtractor

Brief Description:

Qtractor is a free and open-source audio edition or digital audio workstation along with a hard disk recorder. It is fast, lightweight, and small enough to even fit on old floppy disks. This application works only on the Linux OS. It is also famous for its multi-track audio playing capability along with MIDI recording and editing. The source code of this software is written in C++ and uses common QT toolkit for enhancing its graphical user interface to make it so friendly in nature that it can access all options within the working window.
