

This software depends on Advanced Linux Sound Architecture (ALSA) and Jack Audio Connection Kit (JACK).

Why you must get it:

Qtractor provides an environment with multi-track clip-oriented composing techniques which is used widely in modern music making. The aim of this software is to be intuitive and easy-to-use for everyone, from beginners to

professionals. Yet it is powerful enough to push up for a serious enthusiast. This software supports audio file formats of wide range such as OGG, MP3, WAV, FLAC, AIFF and many more through mediums like libvorbis, libmad and libsndfile. This has a non-destructive and non-linear editing environment which is good for novice users. It is capable of playing unlimited number of tracks per session/project and unlimited number of overlapping clips per track either vertical or opaque. This app allows the user to perform audio clip time stretching, pitch shifting and seamless sample rate conversion which integrates the quality of audio edited produced through Qtractor.

Traverso DAW

Brief Description:

Traverso DAW is a digital audio workstation developed using C++ language for source code, to keep it open-source and free for Linux OS users. It is a multitrack audio recording and editing software with extra importance given to providing intuitive, clean and efficient options for a friendly graphical
