

user interface. This app allows the user to use both mouse and keyboard together for precision and speed. The consistent, rather stark interface and the many tools let the user work without the need to learn a lot of applications. The real time audio processing happens very smoothly, uninterrupted, so that the playback of the audio will be based on superior recording. Audio sources are kept in their original format while the editing processing goes on and as filters applied result in non-destructive editing.

Why you must get it:

Traverso DAW application supports recording of infinite number of audio tracks but limited by the capacity of the hardware it is installed on. The basic mixing features are writing to CD and enhancing the project source to various standard audio file formats. The audio engine uses 32-bit floating point precision for every calculation that is handled for providing the highest possible audio quality even after doing editing and mixing. This software has a clear and concise interface and so all actions in the window can be performed using all input devices. This has virtually unlimited track counting feature which allows having more than one track in different channels at the same time. **d**
