2048**Brief Description:**

2048 is an internet sensation game which is played on a 4x4 grid where numbered tiles can be moved within it. The player can move the tiles using four arrow keys which will ultimately hit one of the walls of the grid. With every turn, a new tile will be generated on random tile which is empty with a value of either 2 or 4. If two tiles of same value collide while moving, they get merged and create the added value of them. The resulting tile can't be merged with same value in the same move. The player's score will be noted in the top corner of the screen. The game will end once the board is completely full or if there are no moves possible.

**Why you must get it:**

This game is a lot of fun and the player won't get bored of it even if played for hours. The pace of the game is decided by the player, which can be either quick

or slow. The game is developed with an automatic saving option so that the player never loses an ongoing game if she/he leaves to do some work in middle of the game. The size of the game is negligible and so it doesn't take up too much space on the device. This game can be played online or installed on the device directly.
