Blender

Brief Description:

Blender is an ultra-realistic rendering system which includes GPU and CPU rendering, video editing, modeling, simulation, sculpting and more. Blender is an open-source 3D creation suite. It supports the entire 3D pipeline with the likes of animation, rigging, compositing, rendering motion tracking, stimulation and modeling. Blender will be suited for every individual as well as

small studios who benefit from unified pipeline and the process of responsive development. The software is cross-platform and can run equally well on Windows, Linux and MAC OS PCs. Its interface uses the OpenGL in order to provide consistent experience. As a community-driven project under the GNU General public license, the public are empowered for making small and large changes for the base code. This will lead to new features, better usability and responsive bug fixes.
