TupiTube**Brief Description:**

The TupiTube or Tupi is a 2D animation software that focuses on teenagers, amateurs, and children. This project has been developed and maintained by the startup, MaeFloresta Colombian. This project has been covered under the terms of GNU general public license version 2. It is an open-source software and is free of cost too.

Why you must get it:

The most important goal is to provide easy user experience. It has various features like support of basic tools for vector illustrations which includes the rectangle, lines, polygons and ellipses, etc. The paths can also be created with the help of the pencil or the pen tool. For filling the bounded areas of an object that are in vector, the user can use the paint bucket tool.

The finished animations can also be exported into different formats of the file which include MPEG, AVI SWF, and the image format into JPEG, SVG, and PNG.

Pencil 2D Animation**Brief Description:**

Pencil 2D Animation is an open-source, free software that is increasingly finding uses even commercially. This software was even featured in Hacktoberfest 2018 which is run by Digital Ocean in collaboration with Github and Twilio. Users can seamlessly switch between both, raster and vector workflows, which allows them to sketch, ink and paint in on the go. It even runs on low-powered PCs.
