## Mantis

### Brief Description:

Mantis is an open-source system for tracking bugs that have been created and launched for meeting the few terms of the GNU General Public License Version 2. It has been initially developed as a software bug tracker; most of the companies will implement Mantis as a generic tool for the usage of project management and will issue the tracking. The platform is very easy set up. Right out of the box, the users can start managing their projects and perform some collaboration work with clients and team members. Mantis will provide some benefits like controlling access of the users as per the project, easily and quickly update the teams and the clients through the notification about the issues, comments, and the resolutions. The flexible systems will
