PhotoRec

Brief Description:

PhotoRec is a data file recovery software that has been designed for recovering files that are lost including documents, videos, and files that are achieved from hard disks, pictures that are lost from memory cards of digital camera. PhotoRec software is successful in testing with different portable media players that includes the iPod and the digital cameras like Canon series, Casio Exilim, Nikon, Pentax, Praktica, etc.

Why you must get it:

This has been distributed under the GNU General Public License or the GPLv-2. PhotoRec is a good companion of the program to the TestDisk. In order to have the best, one has to try making a non-bootable disk into the bootable one again. Due to security reasons, this software allows read only access, where it can be handled by the drive or the memory you are about to restore or to recover the data that is lost.

This software will run under the Windows NT 4/2000/XP/2003/ Vista/2008/7/10, Mac OS X, Linux, Dos/Wondows 9x, Sun Solaris, OpenBSD, NetBSD and FreeBSD. Using this one can recover the files from HFS=, exFAT, FAT, NTFS, ext2/ext3/ext4 file systems. One of the best features is that it will work with CD Roms, hard disks, memory cards like Memory stick, Secure Digital or the SD, SmartMedia, MMC etc, DD raw image, and USB memory drives.
