

The latest version has been in development for 6 months and is a good upgrade from 18.10 Cosmic Cuttlefish. While users have the option to upgrade Ubuntu 18.04 LTS (Bionic Beaver) to 19.04 Disco Dingo, it is not a suggested option, given the short lifespan of the new release. Since Bionic is LTS, it is not recommended to move to a release with a shorter support time range.

The open-source movement has spread like wildfire from one sector to another. Right from Telecom to finance to media, it is spreading from one sector to another, at the speed of light. Even the public and private cloud players are incorporating Ubuntu to enhance their provisions. Ubuntu 19.04 is going to lead the path for this transition and take it to new levels.

Installing/upgrading to Disco Dingo

If you are the proud owner of a Linux Ubuntu Operating Systems, then you too can enjoy the benefits of the latest release by installing or upgrading from your current Operating System version to the newest Operating System version. You can wait for the upgrade option to show up on your screen, so that you too can benefit from the newest features of the Disco Dingo version.

Use the steps below to upgrade from 18.10 to 19.04 in a matter of a few steps only.

- 1) To upgrade a desktop system, you need to go to the “Software & Updates” application section.
- 2) Select the “Updates” tab
- 3) You need to set the “Notify me of a new Ubuntu version” option to “For any new version”.
- 4) Press Alt+F2 and then type “update-manager -c” (please remove quotes while typing) into the command box.
- 5) Once all the previous steps have been followed, the Update Manager box should display:
New distribution release ‘19.04’ is available.
- 6) Click upgrade and follow the instructions to upgrade to the newest version in just a few minutes.

Why is Ubuntu 19.04 doing the gossip rounds?

What do users look for when they upgrade to a new Operating Systems version? While security patches and bug fixes are common to all versions, upgrading to a new version has its own set of privileges and benefits. Disco Dingo ships with the latest Linux 5.0 kernel series, which has enabled sup-
