

port for some of its recent hardware components, such as AMD Radeon RX Vega M GPUs, Qualcomm Snapdragon 845 SoC, Raspberry Pi 3 Model B+ along with Intel Cannon Lake graphics.

The all new Linux 5.0 kernel series is said to add USB 3.2 and Type-C along with power saving fixes. This is not all, there is even KVM support for AMD Secure Encrypted Virtualization, which in turn supports P-state driver for Skylake-X servers. Add support for memory protection keys on POWER architectures and zcrypt support on IBM Z systems to the list of benefits and you will begin to understand why this is such a good upgrade.

Another noteworthy feature of the Ubuntu 19.04 (Disco Dingo) version is the availability of the latest GNOME 3.32 desktop feature, which assists in smoothening out the startup animations, supports higher frame rates and facilitates reduced CPU and GPU load. Some other features include the likes of fractional scaling for HiDPI/4K screens in both Wayland sessions and X.Org Server. The desktop is seamlessly integrated with VMWare for easing out the process of file sharing and bi-directional clipboard.

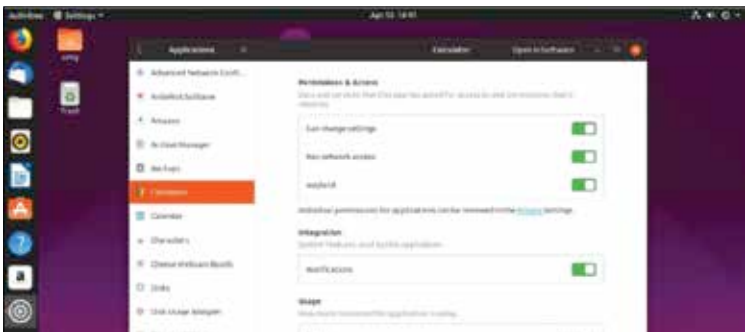

Some other features include, but are not limited to:

- a new iconic theme,
- an all-new improved Yaru theme
- a new Safe Graphics Mode option in the boot menu to help start the system in NOMODESET” parameter

We shall discuss each of these features in detail going forth.

Major desktop improvements for Disco Dingo users

Since the new version is equipped with the GNOME 3.32 release, it delivers a power packed performance to the desktop interface. For example, now you

Ubuntu 19.04, along with GNOME 3.23, gives users a power-packed performance
