

has changed from the usual “squircle” to a more liberal set of icon shapes. This might not be a very realistic change, but it adds a more subtle and unique look and feel to the UI.

New desktop icons extension to the rescue

As Nautilus 3.32 came into force, Ubuntu was unable to display the desktop icons. To rectify this issue and provide ease of use, a new GNOME Shell extension has now been included in the new Operating Systems. The option is called “Desktop Icons”, which brings back the lost icons to the desktop.

‘Desktop Icons’ option helps recover lost icons

GNOME 3.32:

Ubuntu Disco Dingo 19.04 incorporates GNOME 3.32 to the GNOME Desktop Environment, which adds a significant amount of speed to the existing processing powers of the Operating Systems. This has been enabled by the collaboration between the working relationship of Canonical and the GNOME project.

This collaboration has reportedly facilitated better frame rates, seamless start-up animations, quicker icon load times, reduction in the GPU usage, amongst other things. Ubuntu will be making some of its speed changes within GNOME permanent and include it in the 18.04 LTS eventually.

In addition to this, another win which needs a mention, is the GNOME’s indexing tool (Tracker), which has been included as a default in 19.04. In the previous versions, Tracker was a slow performing tool, even though it
