

shortly be taken on a guided tour to help you gain that familiar Windows experience while you are working with Ubuntu.

We begin with learning how to transform the Ubuntu desktop to get that familiar Windows GUI. The next chapter will illustrate Ubuntu's file sharing and access abilities with regards to Windows executables and file formats in addition to accessing an SMB share. We wind up with a look at other popular desktop environments. So get ready as we commence our tour.

Ubuntu Desktop transforms into Windows Desktop

The general perception about Linux and, for that matter, Ubuntu Desktop is that its user-friendliness and maintenance score low points. This perception may get altered after reading further.

Get back that Windows Taskbar

The vertical Taskbar in the Ubuntu PC looks unfamiliar to you. You want to get back to the good old Windows style of Taskbar. It is possible with some minor changes.

Ubuntu provides you with Gnome Extensions utility. This tool makes customisation of the desktop an easy task. Follow the steps given below:

Step 1 - Press Ctrl+Alt+T to start Terminal application

Step 2 - As root user, type the following command -

```
$sudo apt install gnome-shell-extensions gnome-shell-extension-dash-to-panel gnome-tweaks adwaita-icon-theme-full
```

When you execute the above command, you will be asked to enter a password. After you have entered the password, you will get a prompt with a y/n option whether to go ahead with the installation. On pressing y, the installation will commence.

Step 3 - Upon the completion of the installation process, just log out and re-login into your system, so that the shell recognises the tools that were installed.

Step 4 - For accessing Tweaks tool, use the Search tool of the Ubuntu GUI desktop. Type tweaks therein. Tweaks Utility window will pop up as follows.

Step 5 - On the left panel of the Tweaks window, select the option Extensions. In the Extensions panel on the right, set the Dash to Panel button to the ON position.

You will notice that the position of the Ubuntu Taskbar has shifted down similar to Windows. Here now we can see some icons and by hovering over
