

Tweaks Menu

On the left panel of the Tweaks window select Extension. Set the Applications menu button to ON position. All your applications will be grouped under specific categories making it easy to launch applications.

Switch to Windows style theme

If you wish to switch from Ubuntu's default orangish-grey theme to the familiar Windows theme of bluish grey, do the following:

Start the Tweaks tool (as mentioned earlier). On the left panel of the Tweaks window select the option Appearance. In the right panel make the following changes under the Themes head -

Applications: Adwaita

Cursor: DMZ-White

Icons: Adwaita

Lo and behold... your desktop now appears blue-grey colour.

You can download any theme and incorporate that by making a change to the Theme section within the Tweaks tool in the Appearance panel. Just click None besides the Shell option and select the downloaded theme. e.g. Theme Transparent Shell provides you with that Window theme.

Thus we see the Gnome Extensions help to customise taskbar, menu and themes to give us that similar Window Desktop feel. You no longer will feel lost while working on the Ubuntu desktop.
