

in keeping with changing trends. But it does not perform well on older PC versions as resource utilisation is quite high.

## **Gnome**

Gnome is the default Ubuntu desktop environment. It is second best to KDE Plasma in terms of customisability. But it sure is amongst the most popular desktop environments. It is keyboard-friendly and is compatible with most of the touchscreen devices. It does not come with a default taskbar but can be installed.

## **Mate**

Mate is an improvised version of Gnome. It has a more modern look and feel. It is resource-friendly and relatively stable. It works effortlessly on lower end machines. A lot of customisable options are available. However, it lacks aesthetics. Issues with changing user permissions have been reported.

## **Cinnamon**

Also an offshoot of Gnome 3, it is among one of the most popular desktop environments. It bears a striking resemblance to the Windows GUI. The keyboard shortcut feature makes it popular among Windows users. However, the plugins and drivers are not very stable and thus leads to frequent crashing.

## **Xfce**

It is similar to KDE Plasma sans the blur effects. If you are looking for a desktop environment with moderate features but low memory usage, this is your choice. Though lightweight, it does not offer a modern look and feel. The frequency of updates and releases are very low.

## **Deepin DE**

It is very similar to the Windows UI, since it is stable and lightweight. It is very user-friendly and highly customizable. It is supported on most flavours of Linux.

## **Budgie**

Budgie performs well on machines and gaming PCs. Aesthetics keeps with the current trends. Installation on environments, other than Ubuntu, are
