

- Lastly, by using Command Line and Shell Scripts the user has the exact idea of what he is doing, rather than aimlessly wandering in GUI system. Command Line may seem difficult to master, which it is, but it isn't difficult to use at all. You need to know the basics thoroughly and everything else is like learning any programming language.

Getting Started

Now that you have decided to shed the fears and start learning, let us start with the first question that arises in anyone's mind when they start something new and that is "How to get Started?"

How to get started?

Starting Command Line/ Shell Programming is like starting to learn anything that is new to you. First you start with the theoretical basics, in this case, the basic commands and then start to execute what you learn as you prepare yourself to master the Command Line Script.

For now, let us start with the basics of Command Line.

Starting a Terminal

Before we move on to the commands, let us look at numerous ways in which Terminal is accessed in different versions of Ubuntu Systems using the same short cut - Ctrl + Alt + T or Super+T in Xfce..

- **In GNOME**

GNOME is the default desktop environment in Ubuntu 19.04.

[Apps Menu-> Terminal](#)

- **In Unity**

Unity was the default desktop environment in Ubuntu until version 16.04 after which Canonical went back to Gnome 3.

[Dash-> Search for terminal](#)

[Dash-> More Apps-> Accessories-> Terminal](#)

- **In Xfce (Xubuntu)**

[Applications menu-> System-> Terminal](#)

- **In KDE (Kubuntu)**

[Kmenu-> System-> Terminal program \(Konsole\)](#)
