

Here's why KVM is the best VM program for linux

Using KVM on Linux, you will get near-native performance on your PC. Basically, if you're in full-screen mode, you won't even notice that you are running a VM program.

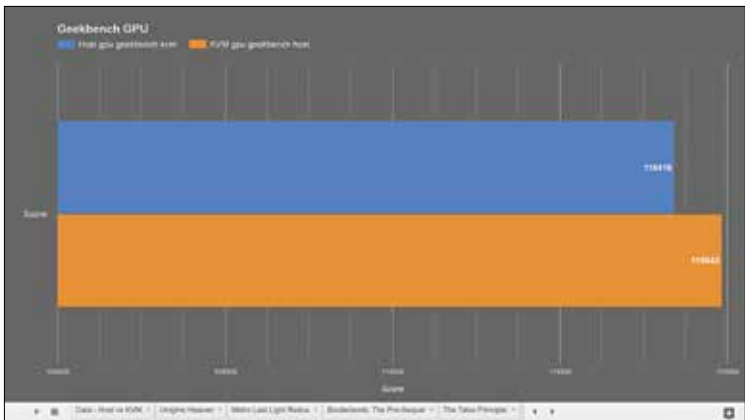

Here are some benchmark comparisons, running a Linux Distro as "Host" and Windows 8.1 as "Guest", compared to running Windows 8.1 directly.

- **Geekbench CPU score comparison**

This score is a good comparison of the overall functioning of the machine, as you can see, the KVM (orange) are neck-to-neck with the native scores (blue)
