

open-source driver through which you can get the graphics to start working but it will not provide the 3D gaming effect. Similarly, the Wi-Fi driver is proprietary, in case the wireless hardware do not work before installation.

Installing the driver in Linux entirely depends upon the distribution. You can search for “additional drivers”, as soon as you will launch it it will automatically detect the proprietary drivers. From there you can easily install the driver. Keep in mind that every Linux system has a different approach to it.

Installation of the printer driver

In order to use the printer, you need to install the driver first. It is often advised that users must choose a printer that they are familiar with, especially when working with Linux.

Once you learn the printer configuration tool which is used to configure a common Linux printing system then it will be easy for you to select the suitable driver for the printer. You have to make a selection from the database and it will involve the finding of the manufacturer of the printer. From this list, you can choose the model number and name of the printer.

While you are setting the printer in Linux configuration tool then you can avail a PPD file in it.

Learn to combat several issues with other hardware

If the Linux distribution has not provided the required drivers then you have to install them on your own. It is always recommended to use the proprietary drivers’ package for your system as they’re considered more reliable than the available packages. In case the driver does not work on Linux and even after installing the proprietary driver things remain the same then there are higher chances that it will not work at all.

When the Linux manufacturers as open source software provide their driver to the kernel then Linux performs best. Generally, it is advised that you should not temper the hardware drivers again and again. It is not essential to tweak then because Linux is open source software and automatically detects the presence of any other hardware.
