

of Windows applications on Linux. Installing Wine on Ubuntu or any other Linux-based OS is quite easy on most Linux distributions repository. There is a huge database of supported applications and games.

CrossOver

CrossOver is like an improved version of Wine which has professional and as well as technical support. However, unlike Wine, CrossOver is not where and requires users to purchase a yearly license. However, these purchases contribute towards better development, which helps bringing more Windows games and apps to the service.

PlayOnLinux

PlayOnLinux is based on Wine but it sports a different interface which is easier to use than Wine. It is free to use and you can browse applications as well as access support which is provided by the app's database.

Browser Games

There are also tons of browser games with are available, essentially, on any OS with addictive games like GoodGame Empire being one of them.

Terminal Games

There are also a sizeable number of terminal games on Linux but the games
