

- `$ FLUSH PRIVILEGES`
- `$ exit`

We towards php configuration:

- `$ sudo nano wp-config.php`

Enter your database credentials which we created in the previous steps to authenticate.

- `$ sudo service apache2 restart`
- `$ sudo service mysql restart`

Now let's go ahead with the WordPress installation.

- In the address bar of your browser, enter the address: "yourdomain-name.com/wp-admin"/
- We're all set and done. Now, you can manage your website through this dashboard.

Congratulations! You're WordPress installation seems fine

- You'll be greeted with a screen similar to this:
- Select your language and then enter your database credentials.
- After submitting, click the install button on the dialog box that follows.
- You'll be asked to set your WordPress credentials.
- After you've finished entering the details click on the 'Install WordPress' button on the bottom of the dialog box.
- To access your dashboard anytime just go to "yourdomainname.com/wp-admin" and log in with your WordPress credentials.
