

Instagram

Of hashtags, stories, and aesthetic.
Instagram can prove to be a creative
outlet and a revenue stream.

Building profile

Instagram is an artistic social media platform where the user creates posts and promotes their own creations. Photos and videos are created for specific audiences, friends or the public, to garner likes and popularity as well as to share one's moments with everyone.

The building of the profile on Instagram begins with the creation of the account, often linked to a Google or Facebook account. After the creation of the login ID, the Insta page opens and is ready for creating the profile. There are several ways to optimise the Insta profile, depending on the purpose for which the profile is going to be used. Users can opt for business Instagram account if they want to create brands and advertise their posts. Statements
