

success and popularity. Main Insta metrics are tracked over a period of time. The metrics are insights that Instagram calculates to help you immediately analyse your engagement rates, rank posts by those rates and compare best performing posts, all at once. Analytics help you optimise your posting tendencies and activities, analyse most and least active users depending on time zones, locations and timings during days and nights. Engagement data is collected over a period of a few months to help you understand in details the performance rates of your posts and creations. This helps you make decisions on the right followers, the right topics of focus and other relevant actions to be taken.

Instagram analytics are available only to those Insta accounts that are transformed into business profiles. The Instagram insight tab on the business profile takes you to different analytics of responses, impact and activity trends. The insight tab shows analytics for both the posts you have posted and the posts you have boosted for promotion.

Conversion tracking

Conversion tracking helps the user measure the number of visitors performing an action after viewing his or her posts and engaging with relevant ads on the Instagram profile. Tracking also enables the effective measurement of the activities related to campaigns, promotions of causes and shopping-related features- this helps in understanding the logistics and fluctuations and logical data of the online traffic. The various actions and activities tracked include site visits, purchases made, downloads viewed and done, signing up processes and customized actions in relation to relevant categories on the profile page's connected catalogues and sites. Instagram's conversion tracking also gives advertisers a full understanding of the conversion details, such as clicked on URLs and relevant engagements with connected and relevant pages.

For the Instagram profile owner, knowing and tracking the traffic regularly is quite significant, and it is important to know whether your marketing efforts are paying off by converting your visitors and followers into action takers and site visitors. You can even track traffic conversions that took place through your Insta stories with the help of related softwares that Instagram provides as tools of analysis. Campaigns and purchase details can be also tracked through campaign parameters and customised Google Analytics Dashboard. To enable a smooth tracking, it is always best to keep posts less cluttered, URL links short and easily accessible and clean.
