

opt for “must also match” interests instead of merely a group of interests. Adding it results in leads to a reduction in click/conversion costs by up to 25% besides leading to a more engaged audience.

#4: Separate Desktop and Mobile Campaigns:

Consumers generally use mobile and desktop differently. Therefore, it is recommendable to separate your campaigns to better target each kind of audience with precise messaging. Also, selecting all browsers except for Internet Explorer will improve all aspects related to your campaign results.

To conclude, optimizing your FB ads is a candid endeavor of series of trial and errors that enable you to identify loopholes in strategies and then tweak it to fetch the desired results.

Tips to build the right Ad Analytics

Facebook is a great social media platform if you are aiming to drive conversions and intend to create long-lasting brand awareness. All you need to do is simply pursue the following tips:-

- Unlock the power of Campaign Budget Optimization.
- Leverage Broad Targeting
- Capitalize on the power of Video View Retargeting
- Ensure providing exclusive treatment to your unique audiences as per segregation.
- Retain attention for an extended time to convey a message
- Demonstrate the benefits of your product to targeted users
- Optimise the power of ‘Smart-targeting’.
- Leverage manual bidding for winning more auctions.
- Invest Time in building creative assets.

Interpret and make changes to content

The ability related to editing and updating campaigns or ads enables you to fine-tune details based on their performance analysis. It is recommended to use Ads Manager to evaluate reporting metrics related to the campaigns. It is also possible to run multiple versions related to ad copy to figure out which version imparts the best result. For instance, if you have been running a Reach campaign along with an ad set over diversified multiple placements, you are yet to select optimization related to the placement. You get to analyze your reporting results and thereafter, you breakdown these
