

cratic values and we're proud of them. I don't want anyone to use our tools to undermine democracy. That's not what we stand for."

This social media giant has come clean regarding violating ethical guidelines. The way it handled the entire crisis management is truly fantastic. Its pro-active attitude related to introducing a freshly developed review process related to internal ethics continues to embrace pioneering solutions since its launch. Talking about the current scenario, ethical research is now embedded in the workflow of researchers and developers.

One brilliant example of the same is its set of tools related to suicide prevention and support. Developed in association with the researchers (University of Washington) is meant to serve the kinds of sensitive users.

To sum up, be it facebook or any other social media platform, ethical considerations must be integrated throughout the research lifecycle right from the conception to analysis to the diffusion of results. **d**
