

Testing and optimisation

We take a look at debugging apps in Flutter, treatment and testing of Flutter apps and more

In this chapter, we will take a look at the testing and optimisation of Google's newest offering-Flutter. The multifaceted application development framework is loaded with a bunch of corrective firewalls.

Inarguably, the most sophisticated tools have been deployed to keep no ends unturned in making Flutter, an open-source framework, free from any kind of operational glitch. The testing and optimisation methods have been developed likewise to search and scan for any kind of system errors or any associated malware that may not only damage the workability of
