

This section of FT will take you through the basics and essentials of what to do, how to do it and when it is time to publish your application on the Apple App Store and Google Play Store.

Preparing Code for Play Store and App Store

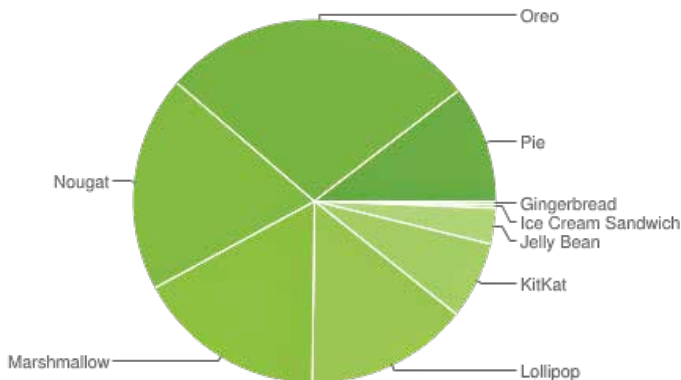

Preparing codes that are compatible with various platforms and define your apps on these platforms is a necessary step that one has to undertake at the time of publishing the application.

In this section, we'll see how to prepare codes for Play Store and App Store for publishing your application. Starting with preparing codes in Android and then Apple App Store.

How to Prepare your Android App Code for Publishing in the Google Play Store

Choosing the right version of Android for your application

Once you create a new project in Android Studio, it asks you for a minimum SDK version. The file named as build.gradle of your project keeps a record of your choices in its minSdkVersion field. You can always change this number by editing the build.gradle file.

Data collected during a 7-day period ending on May 7, 2019

So why is minSdkVersion number so important?

The reasons are as follows:-

- If your minSdkVersion number is too low that means your app isn't using
