Review XCode Project Settings

Navigating your target settings in Xcode :-

1. In Xcode, open Runner.xcworkspace in your app's iOS folder.
2. To view the settings of your application, select Runner project in the Xcode project navigator and then in the main view sidebar, select the Runner target.
3. Select the General tab.

Next, you'll verify some important settings -

a) In the Identity section:

- Display Name: the name of the app that should be displayed everywhere
- Bundle Identifier: the ID of application that you registered on App Store

b) In the Signing section:

- Automatically manage signing: This decides whether Xcode should automatically manage app signing and provisioning. This is set true by default, which should be sufficient for most apps and for more complex scenarios you can always refer to the Code Signing Guide.
- Team: You need to select the team that is associated with your registered Apple Developer account. If required, select Add Account, then update this setting.

c) In the Deployment Info section:
