

- **Deployment Target:** Determine the minimum iOS version your app will support and update this setting accordingly.

Writing Application Configuration for Android and IOS

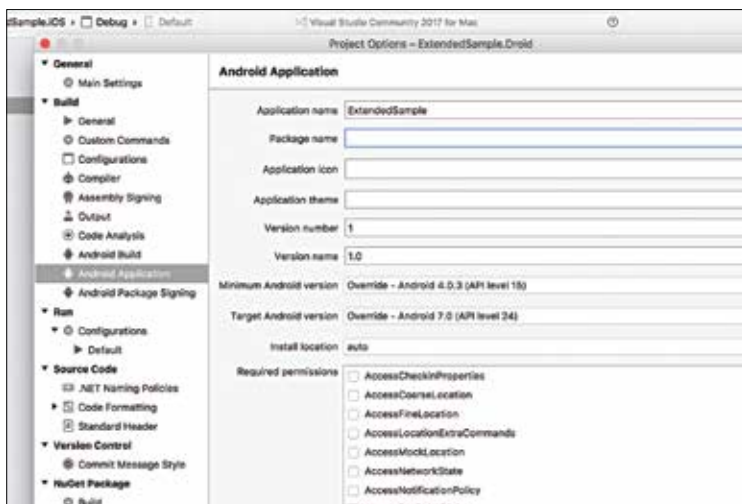

App configuration is an important and integral part of publishing your application, this is the de-facto unpacking of your APK or XCode files and rebuilding them into applications.

Application Configuration for Android

Once you have collected all the material required for publishing the application, you can start configuring for release. This section under Time of Publish will suggest a list of the configuration changes recommended before the release. Although many of the steps listed here are optional, they are still considered professional practices and it is recommended that you try them especially if you are a beginner.

Choosing a relevant package name

It is important to ensure that the packet name you choose is suitable for your application all through its active period because you won't get a second chance to change the package name once the application has been published. You can set the package name in application's manifest file.

Naming your package
