

Do it yourself – Basic

This is the time to flutter. You are now going to create a sample Flutter app quickly.

Building a Simple Calculator App

Assuming that you have already set up the Flutter environment in your system, you will require Flutter SDK and Code Editor, which can be either Visual Studio Code or Android Studio, installed in your system.

Now, Execute the command flutter doctor once to verify whether Flutter SDK is set up correctly in your system or not. Once that's done, you are all set to create a new app in Flutter. This time, you are going to create a simple Calculator app.
