

To accomplish this, create a new Flutter app with the name `ftcalculatorapp`. Then, you need to perform the following tasks:

1. Create the UI for the Calculator app
2. Add interactivity to the Calculator app

Build a simple calculator app with Flutter

Creating the UI for the Calculator App

To create the UI, you need to perform the following steps:

1. Open the `lib/main.dart` file in the Code Editor.

This is the dart file, which contains the `main()` method. Therefore, this is the entry file of your app.

2. In the Code Editor, add the following code snippet:

```
• import 'package:flutter/material.dart';
```

The preceding code snippet is used to import the Flutter material package.

3. Specify the `main()` method, which is the entry point of your app:

```
• void main() => runApp(new MyApp());
```

4. Create a class by extending the `StatelessWidget` class:

```
• class MyApp extends StatelessWidget {  
•   @override
```
