

in this one framework makes it easier for developers to access a rather wide funnel in the near future.

Most of the focus in this FastTrack is on Flutter and Dart, and we go through all the usual steps that you'd have to, from the very basics, to figuring out the complexities of production-class apps such as WhatsApp. We also take you through the various optimisation methods available before finally publishing the app on the respective app stores.

Like always, please write to us at [editor@digit.in](mailto:editor@digit.in) with feedback and suggestions for future FastTracks.
