

it interactive by following a few easy steps which will be elucidated as you further read this supplement.

So, we went through the 6 steps that you need to follow to create your layout using flutter. It's really easy and gives the best result. It is only after using flutter that you realize how uncomplicated it can be.

Make your Flutter App Interactive

If you abide by the following DIY steps to inculcate interactivity in your app, you would be able to easily respond to taps on your app. You would also understand the process of creating a custom widget. Above all, you will be aware of the minute differences between stateful and stateless widgets.

The next step is making your app interactive

Are you curious about modifying your app so that it reacts to user input? In this DIY tutorial, you'll learn how to add interactivity to an app with exclusively non-interactive widgets. If we go into specific details, you'll see how you can modify an icon to make it tappable. This will be done by creating two stateless widgets, managed by a single custom stateful widget. The previous pages, related to the Layout tutorial, explained in detail about
