

- A Windows or Mac computer
- Willingness to learn

Flutter is an amazing platform offered by Google which enables developers to build incredible cross-platform applications abundant in UI.

This platform also enables users to procreate applications for multiple platforms in an extensive array of sets.

This customised array includes a whole sequence of tools and widgets. For the beginners, it is easy to pick up, while those who are experienced in it, find the work easy and fun during the app development.

There are certain improvisations that can be done in order to improve learning. It majorly includes-

- Involving the Google code Labs
- Subscribing to Flutter in order to get daily updates
- Keep a check over the newsletters and tutorials
- Including the Flutter GitHub
- Acquainting yourself with the features of Flutter
- Opting with the initials

In case you face some difficulties within it, there are some steps that can be followed in order to avoid the consequences.

Especially if something is associated with the implementation of any particular function. You can find some relief in trying out these methods or steps to aid you in case of any difficulty -

- **Gitter Chat:** here you can find all the GDEs, active queries and all the other essential googlers which are evolved around Flutter.
- **Slack:** MindOrks
- **Twitter:** Again, here you can find Flutter GDE, product manager and other Flutter development relation teams. They are actively spreading the knowledge in order to provide a platform for Flutter community to grow.

You can monitor their tweets, conferences, meetings , and live streaming in order to monitor the event.

- **Facebook:** Here you can check for regular updates based upon the working dynamics.

There are multiple events which are perfectly suitable for Flutter enthusiasts. You can learn a lot from the nearby Google developer communities or groups.
