Introduction to Flutter

In the last decade, smartphones have certainly been successful in taking the market by storm. One of the companies that led to the revolution of these gadgets, was the technology giant- Google. The same company is leading yet another revolution, however, this time it is surrounding mobile applications. Since the inception of smart gadgets, apps have been noted to run on these, be it any platform. While some apps were designed to run on any platform, some others were coded to work specifically on some particular operating systems. However, they all have one thing in common- the complication related to their codes. Programmers spend hours designing these applications. What makes it even more arduous is the fact that different platforms
