

Specification of the supported locale parameters

The Flutter library is rich in `Flutter_localizations` which has support of 52 languages. It is up to the developer to choose the language for support as it is not relevant for the toolkit library to provide support for a different set of locales. The application which uses multiple “local resolution” method can also provide a solution for `LocalResolutionCallBack`.

In order to gain more information about the locale strings, you can check `flutter_localizations` README.

Few Final Words

In this DIY intermediate guide we have closely learned about the variations and different dynamics of various apps in Flutter.
