

called Scaffold, which features loads of widgets to develop a basic layout.

There are dozens of widgets such as appBar and body, backgroundColor, drawer, floatingActionButton, floatingActionButton Animator and more which are great to get your TabView design set up the right way.

```
// above are the imports
class Home extends StatelessWidget {
  final _tabs = <Widget>[
    Tab(icon: Icon(Icons.camera_alt)), Tab(text: 'CHATS'),
    Tab(text: 'STATUS'), Tab(text: 'CALLS'),
  ];

  @override
  Widget build(BuildContext context) {
    return DefaultTabController(
```
