

Navigation in flutter

Sometimes, it is easier to use Flutter itself as it contains some of the most used and well-known ‘widgets’ such as TabView, ListView and TopAppBar among others. Once you are finished with this section, we move on to the chat room development.

```

• 1 class ChatList extends StatelessWidget {
• 2   @override
• 3   Widget build(BuildContext context) {
• 4     return ListView.builder(
• 5       // itemCount: , <-- Normally we put the data
array's length.
• 6       itemBuilder: (context, index) {
• 7         return ListTile(
• 8           title: Text('Contact $index'),
• 9         );
• 10      },
• 11    );
• 12  }
• 13}

```
