

```

•         child: ListView(...), // chat threads
•       ),
•       Row(...), // input field + send button
•     ],
•   ),
•   // ...

```

Merging Chatroom with Chatlist

The CHATS tab ListView inhabits ListTile, so when a user clicks on this section, it takes them to the chat room view. It happens only when users tap on the ChatRoom view on the ‘navigation stack’. It is not very cumbersome with Flutter, it is easy and simple. All you need to do is click the Navigator.push button. You can reach there by following the below path,

onTap property → ListTile → Navigator.push.

It makes your work faster. When you do it, it uses its automation to add a working back button (←) to the design as well from the TopAppBar.

```

• 1 import 'package:flutter/material.dart';
•
• 2 class ChatList extends StatelessWidget {
• 3   @override
• 4   Widget build(BuildContext context) {
• 5     return ListView.builder(itemBuilder: (context, index)
{
• 6       return ListTile(
• 7         title: Text('Contact $index'),
• 8         /// onTap START ///
• 9         onTap: () {
• 10           Navigator.push(context,
MaterialPageRoute(builder: (context) {
• 11             return ChatRoom(_chatItems[index]); //
passing data to chat room
• 12           }));
• 13         },
• 14         /// onTap END ///
• 15       );

```
