

Flutter. The Title property works with a widget; hence we can use a parent widget with two Children here to place our CircleAvatar. Here the two in two Children refers to the text and the avatar. You need to add a Row to incorporate CircleAvatar and a Text.

```

• 1 // Inside the build() method of our ChatRoom() widget
• 2 return Scaffold(
• 3   backgroundColor: Color(0xFFECE5DD),
• 4   appBar: AppBar(
• 5     title: SizedBox(
• 6       width: double.infinity,
• 7       child: Stack(
• 8         overflow: Overflow.visible,
• 9         children: <Widget>[
• 10           Positioned(
• 11             left: leftOffset,
• 12             top: defaultIconButtonPadding,
• 13             child: CircleAvatar(
• 14               radius: avatarRadius,
• 15               child: chatItem.avatar,
• 16             ),
• 17           ),
• 18           Positioned(
• 19             left: leftOffset + avatarRadius * 2 +
8.0,
• 20             top: defaultIconButtonPadding +
• 21             avatarRadius / 2 -

```
