

Message Thread Designing

In this part, shows a rounded rectangle with a small portion protruded outside on the right hand side top corner. It is a bit tougher from a designing perspective.

However, this portion can be done using ClipPath. Next, we need to maintain the width between the sides using BoxConstraint. As the conditions ask for, you need to set text adjustment in Row, while you can do color adjustment in Container property.

There are more to add to the WhatsApp clone. But, the widget section drives you nuts as there are plenty of widgets to learn about. And with it, the chances of widget wrapping is likely. So far, this WhatsApp Clone design idea works for Android only. But, if you want to know more about cloning a WhatsApp for iOS operating system, you can find loads of widgets on Flutter's Cupertino widget section.
