

Batteries

Batteries or Alkaline Cells look like a set of disproportionate parallel lines.

Voltage Nodes

Schematics Symbols Part 2- Advanced Symbols

Diodes

Diodes are represented by a triangle pressed up against a straight line. Diodes are polarised so the ends are defined, the anode is the one running into the flag symbol while the cathode is the one extending out of the straight line.

Bipolar Junction Transistors (BJTs)

BJTs are three terminal devices with a collector (C), Emitter(E), and a Base (B). There are two types of BJTs, NPN and PNP and both have their symbol.
