

Integrated Circuits

Integrated Circuits are unique because they do so many tasks together that you can't give a symbol for each task they do, so you make a box and write the task performed by each of the pins of the IC.

Unique ICs: Op Amps and Voltage Regulators

Common ICs such as Operational Amplifiers and Voltage Regulators do get a symbol of their own and they are given below.

Names and Values

NAME IDENTIFIER	COMPONENT
R	Resistors
C	Capacitors
L	Inductors
S	Switches
D	Diodes
Q	Transistors
U	Integrated Circuits
Y	Crystals and Oscillators
