

- Broadcom BCM2837B0, Cortex-A53 (ARMv8) 64-bit SoC @ 1.4GHz
- 1GB LPDDR2 SDRAM
- 802.11n Wireless LAN (Dual Band 2.4GHz/5GHz)
- Bluetooth 4.1
- Bluetooth Low Energy (BLE)
- Gigabit Ethernet over USB 2.0 (with a maximum throughput of 300 Mbps)
- 4 USB ports
- 40pin extended GPIO header
- Full HDMI port
- Combined 3.5mm audio jack and composite video
- Camera interface (CSI)
- Display interface (DSI)
- Micro SD card slot
- VideoCore IV 3D graphics core
- Switched Micro USB power source (now supports up to 2.5 Amps)
- Power-over-Ethernet (PoE) support (requires separate PoE HAT, not included)

3. BeagleBone Black

Another good entrant in to the low-cost development board platform segment, this community-supported development platform has a lot to offer for developers and hobbyists alike. The BeagleBone Black version comes with an AM3358

1GHz ARM Cortex A8 that provides plenty of power support for most of the computing needs. Additionally, 512 MB DDR3L DRAM and 4 GB onboard flash is provided which sets this dev board apart from the others.

BeagleBone Black also takes it to the competitors when it comes to expansion interfacing. Equipped with features such as Ethernet, USB Host, OTG, microSD slot, serial, JTAG, onboard HDMI, eMMC, ADC, I2C, SPI, PWM, and LCD, you can pick any expansion interface and work on it, run it without facing any problems.
