

Specifications:**Processor:** AM335X

1GHz ARM Cortex A8

- 512MB DDR3 RAM
- 4GB 8-bit eMMC onboard flash storage
- 3D graphics accelerator
- NEON floating-point accelerator
- 2x PRU 32-bit microcontrollers

Software Compatibility

- Debian
- Android
- Ubuntu
- Cloud9 IDE on Node.js w

Connectivity

- USB client for power & communications
- USB host
- Ethernet
- HDMI
- 2x 46 pin headers

<https://robu.in>**4. Thunderboard React**

Known to be a specialist for IOT based development, research, and projects, this small but mighty development board offers cloud-connected, Bluetooth smart enabled solutions for collecting data so that you can easily collect and prototype it for your IoT development projects. The development board comes with Bluetooth 4.2 and is equipped with ARM Cortex M4 32 kB of RAM and 256 kB Flash. It is also hosts motion sensors for data collection purposes.

The major advantage and a kicker of sorts is the application that comes with Thunderboard React. Once your data collection is complete, the free mobile application available on Android and iOS can visualize the data and control LED states on Thunderboard React hardware.

BGM111 Bluetooth Smart Module contains:

- Bluetooth 4.2 compliant
