

CHAPTER #05

```
252 document.getElementById( 'bigimageDesc' ).innerHTML = descriptionLong + '\n';
253 }
254
255 function updatePhotoDescription() {
256     if (descriptions.length > (page * 9) + (currentImage.substring(0, 1) * 1))
257         document.getElementById( 'bigimageDesc' ).innerHTML = descriptionLong;
258 }
259
260
261 function updateAllImages() {
262     var i = 1;
263     while (i < 10) {
264         var elementId = 'foto' + i;
265         var elementIdBig = 'bigimage' + i;
266         if (page * 9 + i - 1 < photos.length) {
267             document.getElementById( elementId ).src = 'images/' + photos[i - 1].src;
268             document.getElementById( elementIdBig ).src = 'images/' + photos[i - 1].src;
```

The Coding Bit

Let's get into coding with development boards namely the Raspberry Pi and Arduino boards

In this chapter we are going to learn about coding with Arduino and Raspberry Pi development boards. These development boards were designed to cater to new enthusiasts and beginners in order to help them learn how to code in their early life. Boards can act as standalone input-output kits for working and building digital devices.

Arduino

Arduino is designed for programming using its own Arduino Language though it consists of functions from C/C++ as well. Arduino Software (IDE) is open-source and can be easily downloaded from the official site. Java is the official environment, and it is based on processing and 3rd party
