Steps to make an Arduino at home

Building an Arduino is a long process that involves approximately ten steps and a couple of more sub-steps. It can take anywhere from two days to a week, depending on your speed of work. If you wish to build an Arduino, it is best if you start from scratch as that gives you a feeling of accomplishment once you are done. Also, building an Arduino from the beginning helps you understand how the process, or all such similar processes, actually work.

1. Raw Materials You Will Need

The raw materials you need to make an Arduino are listed below:

For building the printed circuit board:

- Copper board: The size taken is 12"x12" but you can choose your own size depending on your requirement.
- Pattern sheet for DIY- Duino: This ensures the proper resolution and size of the image.
- Photo paper: These have a glossy finish. Only the high-quality ones are to be used.
