

The game is quite simple. You tap buttons to fill the grids, mark empty spaces with an X or erase a previous choice. There is no penalty for a wrong choice, but the game does not help you in correcting it either.

Bridge Constructor Portal

Bridge Constructor Portal is an engineering simulation and puzzle video game. As a player, your objective is to design and construct bridges to get one or multiple trucks from one location to another. It is created by ClockStone and published by Headup Games.
