

Car X Highway Racing

Highway racing is something that has driven the genre of car racing to the threshold of extreme pleasure. It is undoubtedly an utter delight to access the game from your smartphone. The aesthetics of the game virtually recreates the environment of a busy highway where you have to drive your car at a lightning speed navigating through the busy traffic. You will have to develop control over your car or else you might get crushed under the wheels of other cars. Speed is something that will

decide the fate of the game. If you over speed, the other vehicles right in front of you will suddenly pull the brake and take a sudden halt for your car to ram into them. Once you slow down, you always stand the chance of getting hit by the speeding cars approaching from behind. It is the uncertainty of the game that makes it immensely popular.

The game has been developed with a seamless device control mechanism which ensures ease of control over the car while you keep your fingers on the buttons. There are two different ways to play games. You can either tap a button on the screen to accelerate the vehicle or you can use an android device's accelerometer.

Racing fever: Moto

Any discussion about racing does not get over without mention about bikes. Bikes have always been a core part of the idea of racing. Racing Fever Moto paves the way for the bikes to the mainstream of mobile
