

One truth about this hugely popular app is that it is fun, there's no denying that. Reportedly, one-third of all devices which downloaded the TikTok app came from India, i.e. 468 million of the total 1.5 billion downloads to be precise. Therefore, it is not surprising at all that the majority of content featured on this platform is India-oriented.

The immense reach of the app has also enabled the company to enter the electronic education market in India with EduTok. They are also trying to diversify into other spheres as well. For instance, the company is testing a social commerce feature which will allow for adding of links in the bio of a profile.

The meteoric rise of TikTok has not been without its fair share of hurdles, however. The app has been part of a global frenzy of sorts with many instances of TikTok users going overboard with their business of making videos. Several have injured and embarrassed themselves in the process. In fact, many have even lost their lives in the process of shooting 15-minute videos for the app. Hard to believe, but true.

Moreover, there have also been concerns about the privacy of the data that people upload on the social media platform. The Chinese company's privacy policies have not only raised questions in the minds of its users but have also raised eyebrows of many in positions of authority in different countries around the world. This issue blew up the most when the Committee on Foreign Investment in the US opened a National Security Investigation on the company.

Apart from privacy, the Indian government has shown concern about the various explicit and abusive content floating on the internet which can expose children to predators.

Moreover, hate speeches and fake news with the potential to incite violence are some other major concerns of the Indian authorities.

The Chinese company is making considerable efforts to change this. Sandhya Sharma, who was previously working with Mastercard, has been reported to join the company to help them with their government relations in India and pacify these concerns. They have engaged several social media influencers to raise awareness against harmful and risky content on the site.

However, in spite of all these problems, the popularity of the app has not reduced significantly and still has the potential to do a lot for its content creators.
