

video on split screen to create a duet of videos.

- Twins – These videos have twins dancing and making funny faces together to create an exact replica of each other.

- Slow-Mo – Slow motion videos are one of the most viewed and liked videos. The slow motion effect makes them extremely funny and hilarious to watch. These videos rate high on engagement index.
- Cosplay – The young energetic audience showcases their cosplays in creative and innovative way using TikTok features. There have been over 5 million cosplay videos and about 12 million views which clearly show the popularity and engagement level among users.
- Celebrity Branding – Most famous celebrities are also resorting to monetise the popularity of TikTok to improve their brand positioning by reaching out to more viewers worldwide. Jimmy Fallon was one of the first celebrities to adapt influencer marketing by initiating Tumbleweed Challenge on TikTok.

Market share and influencer strength of TikTok is rapidly growing as compared to its social networking peers. The app is now working on revenue generating models to allow sustainability. CrunchBase reports suggest that the app generates about a million dollars a year. As of now, TikTok earns through in-app purchases in terms of coins which ranges from 100 coins for \$0.99 to 10,000 for \$99.99. This allows users to access content and paying coins to the creators. TikTok is still at a nascent stage and needs to build a consistent profit generating revenue model.

The major source of revenue for all social media channels is advertising revenue which is linked to the number of views, likes, shares and conversions through the leads generated on TikTok. Thus revenue generation will be directly related to the popularity of the application. Social networking sites cannot completely rely only on advertisement revenue since brands can have cyclical business or have constrained marketing budgets to adhere to their cost structure.

Subscription plans for original short format content is an additional avenue for revenue generation. Content creators can monetise through their content and earn money while the app can also earn by charging a
