

MySQL Create Table

When creating a table in MySQL, you can define different properties to this specific table. Generally we can create a simple table with minimum configuration,

```
CREATE [TEMPORARY] TABLE [IF NOT EXISTS] tbl_name
    (create_definition,...)
    [table_options]
    [partition_options]
```

Or with Select statement by this.

```
CREATE [TEMPORARY] TABLE [IF NOT EXISTS] tbl_name
    [(create_definition,...)]
    [table_options]
    [partition_options]
    select_statement
```

However, the full default syntax for Create statements is given by this.

```
CREATE [TEMPORARY] TABLE [IF NOT EXISTS] tbl_name
    { LIKE old_tbl_name | (LIKE old_tbl_name) }
create_definition:
    col_name column_definition
    | [CONSTRAINT [symbol]] PRIMARY KEY [index_type] (index_
col_name,...)
        [index_option] ...
    | {INDEX|KEY} [index_name] [index_type] (index_col_
name,...)
        [index_option] ...
    | [CONSTRAINT [symbol]] UNIQUE [INDEX|KEY]
        [index_name] [index_type] (index_col_name,...)
        [index_option] ...
    | {FULLTEXT|SPATIAL} [INDEX|KEY] [index_name] (index_
col_name,...)
        [index_option] ...
    | [CONSTRAINT [symbol]] FOREIGN KEY
        [index_name] (index_col_name,...) reference_definition
    | CHECK (expr)
```

column_definition:

```
data_type [NOT NULL | NULL] [DEFAULT default_value]
[AUTO_INCREMENT] [UNIQUE [KEY] | [PRIMARY] KEY]
[COMMENT 'string']
[COLUMN_FORMAT {FIXED|DYNAMIC|DEFAULT}]
```
